

HumiSeal

HumiSeal[®] 1B31 Acrylic Conformal Coating Technical Data Sheet

HumiSeal[®] 1B31 is a fast drying, single component, acrylic conformal coating that provides excellent moisture and environmental protection for printed circuit assemblies.

HumiSeal® 1B31 coating has the following advantages:

- Demonstrates excellent flexibility
- Protection against moisture and dirt
- Fluoresces under UV for ease of inspection and is easily repaired.
- Meets the requirements of MIL-I-46058C
- Meets the requirements of IPC-CC-830
- Meets the requirements of IEC61086
- Compliant to REACH and RoHS Directive EU 2015/863

Properties of HumiSeal® 1B31 Liquid Coating

Density, per ASTM D1475 Solids Content, % by weight per Fed-Std-141, Meth. 4044 Viscosity, per Fed-Std-141, Meth. 4287 VOC Drying Time to Handle, per Fed-Std-141, Meth. 4061 Recommended Thinner (dipping & brushing) Recommended Thinner (spraying) Shelf Life at Room Temperature, DOM $0.91 \pm 0.02 \text{ g/cm}^3$ $35 \pm 3 \%$ $200 \pm 15 \text{ centipoise}$ 592 grams/litre 10 minutesHumiSeal[®] Thinner 503 HumiSeal[®] Thinner 521, 521EU 24 months

HumiSeal

Application of HumiSeal® 1B31

Conformal coatings can be successfully applied to substrates that have been cleaned prior to coating and also to substrates assembled with low residue "no clean" materials. Users should perform adequate testing to confirm compatibility between the conformal coating and their particular assembly materials, process conditions and cleanliness level. Please contact HumiSeal[®] for additional information.

Dipping

Depending on the complexity, density and configuration of components on the assembly, it may be necessary to reduce the viscosity of HumiSeal[®] 1B31 with HumiSeal[®] Thinner 503 in order to obtain a uniform film. Once optimum viscosity is determined, a controlled rate of immersion and withdrawal (5-15 cm/min) will further ensure even deposition of the coating and ultimately a uniform film. During the application, evaporation of solvent causes an increase in viscosity that should be adjusted by adding small amounts of HumiSeal[®] Thinner 503. Viscosity in the dip tank should be checked regularly using a simple measuring device such as a Zahn or Ford viscosity cup.

Spraying

HumiSeal[®] 1B31 can be sprayed using conventional spraying equipment. Spraying should be done in an environment with adequate ventilation so that the vapour and mist are carried away from the operator. The addition of HumiSeal[®] Thinner 521 or 521EU is necessary to ensure a uniform spray pattern resulting in pinhole-free film. The amount of thinner and spray pressure will depend on the specific type of spray equipment used and operator technique. The recommended ratio of HumiSeal[®] 1B31 to HumiSeal[®] Thinner 521 or 521EU is 1:1 by volume; however the ratio may need to be adjusted to obtain a uniform coating.

Brushing

HumiSea[®] 1B31 may be brushed with a small addition of HumiSeal[®] Thinner 503. Uniformity of the film depends on component density and operator's technique.

Storage

HumiSeal[®] 1B31 should be stored away from excessive heat or cold, in tightly closed containers. HumiSeal[®] products may be stored at temperatures of 0 to 35°C. Prior to use, allow the product to equilibrate for 24 hours at a room temperature of 18 to 32°C.

Caution

Application of HumiSeal[®] Conformal Coatings should be carried out in accordance with local and National Health and Safety regulations.

The solvents in HumiSeal[®] Conformal Coatings are flammable. Material should not be used in presence of open flame or sparks. Use only in well-ventilated areas to avoid inhalation of vapours or spray. Avoid contact with skin and eyes.

Consult MSDS/SDS prior to use.
